

ONYX Graphics Workflow Products v7.1 and Windows Vista® Compatibility

Although ONYX v7.1 software is compatible with Windows Vista, ONYX does not at present support any printer that requires SCSI connectivity using this operating system. If your Océ printer uses a SCSI interface, do NOT upgrade to Windows Vista.

To clarify this compatibility issue, the problem is that there is no ASPI layer support from the manufacturers of SCSI cards/chipsets for Windows Vista. Onyx can only support printing to a printer that provides SCSI connectivity to available Windows supported SCSI ASPI layers. If any manufacturers of SCSI cards develop this support in future, we will advise you of that situation once we confirm that the compatibility issue is resolved.

Additional compatibility information can be found at: <http://www.onyxgfx.com/vista.html>
