

ONYX ProductionHouse 7.2 Released

You can download version 7.2 now from www.onxygfx.net and update the demo installations and any customer sites that may have been waiting for the release.

New Features in Version 7.2

- Improvements in the ONYX ICC Profile Generator increase accuracy and smoothness of grey and black generation, improving accuracy on CMYK+ printers.
- Profile generation for CMYKSS inks.
- Dynamic ink separation technology maximizes the use of special printers' inks, while still maintaining accurate grey and spot color matching.
- Improved spot color matching.
- Integrated RAL and HKS color libraries as well as PANTONE® Goe uncoated.
- Support for automatic spot color matching in color blends, for easy and accurate color matching of gradient logos and graphics.
- The compatibility of the Profile Download client with firewalls has been improved. The Profile Download client will allow the download of printer drivers with a single profile, thus limiting the download time. The Profile Download client will allow the download of selected profiles only.

Additional Updates

- Fixes for PDF transparencies and other RIP file issues
- Improved cut contour speed and accuracy
- Multi-select jobs added to Layout
- Nesting for Mutoh Ultima cutters now possible with space between images
- Removed 500,000 line limit on PDF/EPS files
- Consistent application of ICC profiles embedded in PDF 1.7 files
- Localization and translation updates
- Import button for measurement readings in the Media Manager.

Profiling guide

A new profiling guide was published on the Onyx web site.

Profile Guide link: <http://onyxgfx.net/Wiki/Table%20of%20Contents.html>

Availability

Version 7.2 DVD sets will be available via an order form (September 2008).

A full version can also be downloaded from <http://www.onyxgfx.net>.

Note: The download version does not include the drivers for the Océ CS6xxx and Océ CS7xxx printers (to prevent the file growing too much in size).

The DVD version will include all drivers and will upgrade all printers.

How To upgrade the Océ CS6xxx and Océ CS7xxx Printers with the downloaded version

Follow this procedure:

1. Download the new 7.2 application from Onyx.
2. Download the appropriate 7.2 driver installation file.
3. Backup all your profiles and quicksets.
4. Uninstall Onyx 7.0/7.1.

-
5. Reboot the computer.
 6. Install version 7.2, including the printer driver.
 7. Restore the profiles and quicksets.

Optionally it is possible to uninstall only the Océ CS6xxx or Océ CS7xxx printer driver, back up profiles and quicksets, and then perform an upgrade of the program. You can choose to skip Steps 4 and 5. After the upgrade, install the new printer driver.

Note: Autoupdate will notify customers of the existence of version 7.2. Autoupdate will not update the software to version 7.2, but will only display a notification of availability.
